30/04/2024

BOND ■

## Key Information (Source: Amundi)

Net Asset Value (NAV) : (A) 104.88 ( EUR )  
(D) 863.18 ( EUR )

NAV and AUM as of : 30/04/2024

Assets Under Management (AUM) :  
2,190.32 ( million EUR )

ISIN code : LU1050469870

Bloomberg code : (A) AIBEIEC LX  
(D) AIBEIED LX

Benchmark :  
100% BLOOMBERG BARCLAYS EURO TREASURY  
50BN BOND INDEX

## Objective and Investment Policy

The objective of this Sub-Fund is to track the performance of Bloomberg Euro Treasury 50bn Bond Index (the "Index"), and to minimize the tracking error between the net asset value of the Sub-Fund and the performance of the Index.

## Risk Indicator (Source : Fund Admin)

Lower Risk

Higher Risk

The risk indicator assumes you keep the product for 4 years. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

## Returns (Source: Fund Admin) - Past performance does not predict future returns

### Performance evolution (rebased to 100) from 31/10/2016 to 30/04/2024\* (Source: Fund Admin)

A : Performance of the Sub-Fund since the date of its launch

B : Benchmark index from creation until 18/04/2024 : Bank of America Merrill Lynch 1-10 Year Euro Government Bond.

Benchmark index from 18/05/2017: J.P. MORGAN GBI EMU Investment Grade

C : Since this date, the reference index of the sub fund is Bloomberg Euro Treasury 50bn Bond Index

### Cumulative returns\* (Source: Fund Admin)

Spread	-0.12%	-0.14%	-0.09%	-0.12%	-0.14%	-0.09%	-0.12%	-0.30%	-0.25%	-

\* Source : Amundi. The above cover complete periods of 12 months for each calendar year. Past performance is no predictor of current and future results and does not guarantee future yield. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

### Morningstar rating ©

Morningstar Overall Rating © : 4 stars  
Morningstar Category © : EUR GOVERNMENT BOND  
Rating date : 30/04/2024  
Number of funds in the category : 576

### Risk indicators (Source: Fund Admin)

	1 year	3 years	5 years
Portfolio volatility	5.66%	7.03%	6.17%
Benchmark volatility	5.66%	7.03%	6.14%
Ex-post Tracking Error	0.10%	0.12%	0.24%
Sharpe ratio	-0.25	-0.92	-0.43
Portfolio Information ratio	-0.83	-0.90	-0.48

\* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year.

The Sharpe Ratio is a statistical indicator which measures the portfolio performance compared to a risk-free placement

### Portfolio Indicators (Source: Fund Admin)

	Portfolio
Modified duration <sup>1</sup>	7.07
Median rating <sup>2</sup>	A-
Yield To Maturity	3.16%

<sup>1</sup> Modified duration (in points) estimates a bond portfolio's percentage price change for 1% change in yield

<sup>2</sup> Based on cash bonds and CDS but excludes other types of derivatives

Management commentary

April was once again a month marked by the tempo of Central Banks in response to economic developments. In the United States, GDP growth in the first quarter was below consensus expectations (+1.6% vs. 2.5%), but domestic demand remained strong. The latest figures from the US S&P Flash PMI indicate that business activity slowed somewhat in April, reaching its lowest level in four months, due to weaker demand and signs of a slowdown in the service sector job market. US inflation showed signs of stability, with a monthly increase of +0.4%, higher than expected (+0.3%), and a year-on-year increase of 3.5% (compared to 3.2%). Core inflation stood at +0.4% on a monthly basis (compared to expectations of +0.3%) and remained stable on an annual basis (3.8%). Overall, expectations for personal spending, the economic outlook, and labor markets have remained stable over the past four months.

In Europe, the April Flash PMI indices for the eurozone confirmed signals from other indicators that the economy is improving, thanks to a significant improvement in the services sector, while the manufacturing industry (surprisingly) continues to face challenges. The composite PMI reached 51.4 (compared to 50.3 in March), the highest level in 11 months, mainly driven by the services sector. Inflation in the eurozone slowed in March, with a decrease of 0.2% for both overall inflation (2.4% compared to 2.6%) and core inflation (2.9% compared to 3.1%). The decline in services inflation and core inflation supports the idea of a rate cut by the ECB by mid-year.

In this context, all eyes are on inflation dynamics, with services being the main driver (e.g. wage increases). In early April, Jerome Powell reiterated that the Fed had time to consider its first interest rate cut. Then, the FOMC minutes showed that the Fed was not in a hurry to cut rates, with growth dynamics indicating stronger-than-expected growth in the first half of the year, in a context of resilient consumption. Finally, the Fed's Beige Book presented "cautiously optimistic" prospects for the US economy and data on economic activity that suggest solid growth in the quarter.

In Europe, the time for rate cuts is approaching rapidly for the ECB. Disinflation will continue, but it will remain irregular (e.g. energy prices). The European institution has left its monetary policy unchanged, paving the way for an expected rate cut by the markets at the June meeting.

In early April, rates increased sharply following the release of the US ISM manufacturing index on April 1st. Then, US rates reached their highest level since the beginning of the year after several economic data points came in better than expected. Bond yields were generally higher on the longer end of the curve and stable on the shorter end. They then continued to rise, marking a decoupling from eurozone yields. And despite a slight decline at the end of April, the recent decoupling on both sides of the Atlantic is justified, due to divergent economic cycles and a more pronounced slowdown in inflation in Europe compared to the United States.

The US 10-year rate ended April at 4.68%, up 48 basis points from the previous month (4.20% at the end of March). In the eurozone, the end of April was an important period for France, as the update of the ratings by the major agencies was highly anticipated. Fitch, which had downgraded France's credit rating last year, left it at AA- and Moody's maintained the rating at Aa2, one notch above Fitch, but stated that it was "unlikely" that France would achieve its deficit target. The French 10-year rate was relatively unaffected by these announcements and ended at 3.05% (+25 basis points), while the German Bund rose from 2.30% to 2.58% (+28 basis points). Italian and Spanish yields stood at 3.91% (+24 basis points) and 3.35% (+19 basis points), respectively.

This portfolio is managed in an index-linked manner relative to the Bloomberg Euro Treasury 50bn Bond Index. We minimize the relative sensitivity exposure between the portfolio and its index by investing in a limited number of securities, ensuring minimal risk.
